Tanvir Ahmed

Software Engineer

Tanvir.rafee405@gmail.com | +880 1871 752332 | tanvir-ahmed98.github.io | github.com/Tanvir-Ahmed98 | Dhaka, Bangladesh

PROFESSIONAL SUMMARY

Results-driven Software Engineer with 5+ years of hands-on experience designing, building, and maintaining production-grade SaaS systems. Proven track record delivering robust multi-tenant platforms, integrating third-party REST APIs, and optimising data-heavy dashboards for performance and reliability.

Technically versatile across React.js, TypeScript, Vue/Nuxt, PHP/Laravel, Python, and relational databases (MySQL, PostgreSQL). Experienced with Debian Linux/VPS server administration, SSL/TLS configuration, and deployment workflows, and with AI and MCP automation using Python. Team lead who bridges frontend, backend, and operational concerns to ship reliable software on time.

BSc in Computer Science & Engineering (East West University). Actively expanding expertise in cloud infrastructure, containerisation, and Infrastructure-as-Code through hands-on AWS, Docker, Terraform, and Kubernetes labs.

EDUCATION

BSc in Computer Science & Engineering (CSE) *2016 - 2020*
East West University *Dhaka, Bangladesh*

Relevant Areas: Data Structures & Algorithms, Database Systems, Software Engineering, Operating Systems, Computer Networks, Object-Oriented Programming, Web Technologies.

HSC - Rajarbag Uccha Madhymik Biddyalou *2013 - 2015*

SSC - Ideal School and College *2002 - 2013*

CORE COMPETENCIES

- SaaS Product Development
- Multi-Tenant Architecture
- Cloud & DevOps Fundamentals
- REST API Integration & Design
- Performance Optimisation
- Database Design & Optimisation
- Linux / VPS Administration
- SSL/TLS & Deployment Support
- AI-Assisted Development
- AI & MCP Automation
- Python Automation
- Team Leadership & Code Review

PROFESSIONAL EXPERIENCE

Software Engineer *Jan 2025 - Present*
Automate IT Ltd. *Dhaka, Bangladesh*

- Maintained and expanded a multi-tenant Education Management ERP used across institutional clients, delivering reliable workflows for fees, attendance, admissions, leave management, and ID card design.
- Designed scalable frontend architecture using Vue.js / Nuxt.js, PrimeVue, PrimeReact, and reusable component patterns to improve cross-module consistency and delivery speed.
- Integrated and stabilised REST APIs across data-heavy ERP screens, applying defensive error handling, server-side pagination, filtering, sorting, and API call optimisation.
- Diagnosed performance bottlenecks in large admin dashboards and improved responsiveness through state-management refinements, lazy loading, memoisation, and more efficient data-fetching patterns.
- Contributed to release planning, environment configuration reviews, production debugging, and deployment support on Linux/VPS infrastructure.
- Used ChatGPT, GitHub Copilot, and Claude to accelerate implementation while critically reviewing and refactoring generated output into clean, testable, production-grade code.

Software Engineer (Team Lead) *Feb 2024 - Dec 2024*
Coder Charm Inc. *USA*

- Led and mentored a team of developers, owning technical direction, task breakdown, and on-time delivery across multiple SaaS products.
- Planned sprints, estimated work, assigned tasks, and tracked progress, removing blockers to keep releases on schedule.

- Reviewed code and enforced coding standards, component architecture, and best practices to keep the codebase clean and maintainable.
- Acted as the main technical point of contact between developers, product stakeholders, and clients, translating requirements into clear technical tasks.
- Made architecture and technology decisions, coordinated releases and QA handoffs, and onboarded and coached junior developers.
- Developed and maintained UZO Sign, a multi-tenant document verification SaaS, and Dimhum, a role-based crowdshipping platform serving sender, receiver, traveller, and administrative workflows.
- Built scalable frontend modules with React.js and TypeScript, using reusable components, modular state management, and responsive UI patterns for maintainable SaaS delivery.
- Implemented secure role-based flows, tenant-scoped interfaces, document review journeys, order creation, shipment tracking, payment-related states, and operational dashboards.
- Integrated REST APIs with resilient loading, validation, error, and empty-state handling to improve reliability under variable network and data conditions.
- Optimised dashboard rendering and user experience through memoisation, pagination, advanced filtering, lazy loading, and cleaner failure-state indicators.

Jr. Application Developer - Systems & Operations Exposure *Mar 2022 - Sep 2023*
Bondstein Technologies Ltd. (A Concern of Runner Group) *Dhaka, Bangladesh*

- Built and maintained a Stock (Inventory) Management System in Raw PHP and MySQL, with data tables, filters, pagination, and full CRUD workflows for warehouse and logistics teams.
- Built and enhanced the IoT-based Vehicle Tracking System (VTS) using Raw PHP and MySQL, delivering operational dashboard features, fixing data defects, and improving module reliability for internal teams.
- Worked on backend systems built with Raw PHP, MySQL, and Debian Linux, writing server-side logic, optimising database queries, and supporting production environments.
- Administered Debian Linux VPS environments: configured and renewed SSL/TLS certificates, managed server tasks, and supported application deployments.
- Supported cross-functional teams by debugging API integration issues, writing technical documentation, and participating in code reviews.
- Delivered features with strong attention to reliability and maintainability through structured debugging and iterative testing.

Software Engineering Intern *Nov 2021 - Mar 2022*
Bondstein Technologies Ltd. (A Concern of Runner Group) *Dhaka, Bangladesh*

- Built foundational applications using PHP and MySQL CRUD modules and REST API integrations.
- Participated in code reviews and adopted team standards for naming, component structure, and maintainable implementation patterns.
- Practised systematic debugging to isolate issues, trace data flows, and deliver focused fixes in an agile team environment.

KEY PROJECTS

UZO Sign - Multi-Tenant Document Verification SaaS (Coder Charm Inc.) | *React.js, TypeScript, REST APIs*

- Built a multi-tenant document verification platform with role-based access control, secure authentication flows, and tenant-scoped data isolation.
- Designed reusable components including form builders, document viewers, and status trackers to simplify feature delivery and maintenance.
- Optimised dashboard performance through memoisation, virtualised lists, and careful API query structuring for high document volumes.

Dimhum - Crowdshipping SaaS Platform (Coder Charm Inc.) | *dimhum.com* | *React.js, TypeScript, Vue.js, Nuxt.js*

- Delivered scalable modules supporting sender, receiver, and traveller roles with separate workflow states, transactions, and shipment tracking.
- Integrated REST APIs for order creation, tracking, and payment-related flows with resilient error handling and optimistic UI updates.

- Improved operational support UX through clearer failure states, advanced filters, and export-ready administrative dashboards.

Education Management ERP (Automate IT Ltd.) | *app.academyims.com* | *Vue.js, Nuxt.js, PrimeVue, PrimeReact*

- Delivered 7+ core ERP modules covering fees, attendance, admissions, leave management, and ID card layout design.
- Implemented high-performance tables with server-side filtering, pagination, and sorting for large student and staff datasets.
- Maintained a modular UI architecture supporting consistent UX and long-term extensibility across institution clients.

Courier Service Platform | *xpressintown.com* | *React.js, Pathao API Integration*

- Integrated Pathao logistics APIs for shipment creation, label generation, and tracking to streamline courier operations.
- Built reliable booking and dispatch flows with validation, clear error states, and intuitive status progression.

Vehicle Tracking System (VTS) (Bondstein Technologies Ltd.) | *Raw PHP, MySQL, Debian Linux*

- Built an IoT-based vehicle tracking system with operational dashboards for internal teams to monitor vehicle data.
- Deployed and supported on Debian Linux VPS with SSL/TLS configuration and production troubleshooting.

Stock Management System (Bondstein Technologies Ltd.) | *Raw PHP, MySQL, Debian Linux*

- Built stock and inventory modules with data tables, filters, pagination, and full CRUD workflows for warehouse and logistics teams.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, PHP, HTML5, CSS3, SQL
Frontend	React.js, Next.js, Vue.js, Nuxt.js, Redux, Zustand, React Query, Tailwind CSS, PrimeVue, PrimeReact
Backend	Raw PHP, PHP, Laravel, REST API Design & Development, JWT / OAuth Authentication & Authorisation Patterns
Databases	MySQL, PostgreSQL - schema design, query optimisation, indexing strategies, migrations
Systems & Ops	Debian Linux Server & VPS Administration, SSL/TLS Setup & Renewal, Deployment Support, Log Analysis, Server Debugging
AI & Automation	Python, MCP (Model Context Protocol) automation, AI workflow automation
Cloud / DevOps	AWS fundamentals (EC2, IAM, S3), Docker & containerisation, Terraform (IaC concepts), Kubernetes basics, CI/CD pipeline familiarity
Engineering	Git & version control, Code review practices, Agile/Scrum workflows, Architecture discussions, Cross-team collaboration, Team leadership, Mentoring
AI Tools	GitHub Copilot, ChatGPT, Claude - used to accelerate delivery; outputs critically reviewed and refactored into clean engineering solutions

PROFESSIONAL DEVELOPMENT & CONTINUOUS LEARNING

- Actively pursuing cloud and DevOps upskilling through hands-on lab projects in AWS (EC2, IAM, S3), Terraform infrastructure-as-code, Docker containerisation, and Kubernetes orchestration fundamentals.
- Maintaining a public GitHub portfolio with ongoing cloud/IaC/container learning projects demonstrating practical application of infrastructure concepts alongside production-focused application code.
- Staying current with modern frontend ecosystem developments including React Server Components, TypeScript advances, performance optimisation techniques, and scalable state-management patterns.
